TEST SUMMARY REPORT

Project name	**DemoBlaze Project**
Application	**https://demoblaze.com/index.html**
GitHub Url	**https://github.com/AutoTestPriyanka/demoblaze-automation-framework.git**
Test summary report date	**22-04-2026**
Testing Type	**Automation Testing (Selenium + TestNG)**
Tested by	**Priyanka**

1. OBJECTIVE OF TESTING

The testing aims to validate that core e-commerce workflows function correctly from a user perspective, including product selection, cart management, and checkout processes. It focuses on identifying functional, usability, data validation and cross-browser defects to ensure automation readiness, and reduce production risks by validating critical business scenarios. Additionally, the testing ensures that major modules are stable enough to support Selenium-TestNG automation

---

2. SCOPE OF TESTING

❖ In-scope

- Home page and navigation bar
- Category filtering: Phones, Laptops, Monitors
- Product listing and product details pages
- Carousel/banner display
- Sign up modal
- Log in / Log out
- Cart page and item management
- Place Order / Purchase flow
- Contact modal
- About Us modal
- Basic responsive behavior and browser compatibility
- Client-side validation, alert handling, and message behavior

❖ Out-of-scope

- Payment gateway testing
- Database validation
- Performance testing

3. TEST ENVIRONMENT

- Device: Laptop, Mobile
- OS: Windows 10
- Browsers: Chrome, Firefox
- Automation Tools: Selenium WebDriver, TestNG
- Language: Java
- Reporting: TestNG Reporter, screenshots, Extent Reports, Excel (Test case creation, Defect reporting)

4. TEST ARTIFACTS CREATED

- Test Plan Document
- Test Cases
- Defect Tracking
- Test Summary Report
- Test Sign-off document

5. TESTING TYPES PERFORMED

- Functional Testing
- UI/UX Testing
- Data-Driven Testing
- Cross-Browser Testing
- Negative Testing
- Usability Testing

6. DEFECT SUMMARY

Severity	No. of Defects	Status (Open/ Closed)
Critical	2	Open
Major	13	Open
Minor	13	Open
Trivial	3	Open
Total	31	Open: 31 , Closed:0

7. TEST METRICS SUMMARY

Item	Count
Total Test Cases Executed	168
Test Cases Passed	137
Test Cases Failed	31
Test Cases Blocked	0
Defects Reported	31
Defects Closed	0
Pass Percentage	81.55%

---

8. TEST SCHEDULE AND DURATION

- Test Planning Start: 24/03/2026
- Test Execution Period: 26/03/2026 – 20/04/2026
- Total Duration: 20 Working days

---

9. RISKS AND ISSUES

- Frequent UI changes causing automation instability.
- Weak validation logic leading to functional defects.
- Unclear error messages creating ambiguity in testing.
- Browser compatibility issues impacting user experience.
- Flaky tests due to synchronization challenges

---

10. TEST RESULTS SUMMARY

Testing of the Demoblaze application was completed with a total of 168 test cases executed, out of which 137 passed and 31 failed, resulting in an overall pass percentage of 81.55%. No test cases were blocked, ensuring smooth execution.

A total of 31 defects were identified, all currently in open status, indicating areas requiring immediate attention. Core functionalities such as product browsing, navigation, and cart operations

performed reliably in most scenarios. However, defects were primarily observed in input validation, authentication workflows, and UI behaviour.

Overall, the application demonstrates moderate stability, but requires defect resolution and regression testing before production readiness.

---

11. CONCLUSION & RECOMMENDATION

The application shows good functional coverage with acceptable stability, as a majority of test cases have passed successfully. However, the presence of unresolved defects, especially in critical and major categories, indicates that further improvements are required.

RECOMMENDATION

- Fix all critical and major defects before release
- Improve input validation and error handling mechanisms
- Stabilize automation scripts by addressing flaky tests
- Perform full regression testing after defect fixes
- Re-validate cross-browser compatibility
